Features

The IE-CSM is designed to allow plugging several adapters side-by-side in adjacent patch panel or wall outlet jacks. Its flexible cable will distribute the strain in all directions. The electric features of this adapter allow its use in Class D cabling systems according to ISO IEC 11801.

Installation

The IE-CSM is always installed in pairs. On the distribution side the two services are connected to the installation line through the adapter. On the terminal side the adapter is connected to the wall outlet to collect and direct the services from the 8 wire line to the terminal devices.
The flexible adapter cable is distributing the strain of the connecting cables and patch cords acting upon the adapter.
